TITLE : TELEVISION DEVICE FOR VEHICLE

ABSTRACT : PURPOSE: To use a table both for its original purpose and for receiving a picture image by openably/closably providing a television cathode-ray tube device on said table which is openably/closably installed on the back side of a seat back and making said device flush with the table when it is closed.

CONSTITUTION: A table 3 is openably/closably installed on the back side of a seat back 1 and housed in a recessed part 7 provided on the back side of the seat back when it is closed while becoming a horizontal plane when it is opened. And, a television cathode-ray tube device 4 is openably/closably installed on the table 3. A housing recessed part 6 is formed on the surface side of the table 3 in such a way that when the cathode-ray tube device 4 is closed with its display face faced down, its top face becomes flush with the surface of the table 3. Hence, normally, the cathode-ray tube device 4 and the table 3 are housed in the recessed part 7 on the back of the seat back with their faces being flush and, when the table 3 is opened with the cathode-ray tube device 4 kept housed in the recessed part 6, the table can be effectively used, whereas, a picture image can be received when the cathode-ray tube device 4 is opened in that condition.
